## GATEKEEPER

Use in high crowd pressure areas: ★★★☆☆

Gatekeeper offers a secure system which manages all aspects of entry and exit into and out of events, venues and designated areas (such as VIP or staff only)
An intelligent turnstile, it links directly to an easy to use central computer system which gives accurate, real time capacity data. Quick to install Gatekeeper facilitates full scanning capabilities and is compatible with any scan methods.

Gatekeeper can work in partnership with event organisers, ticketing and scanning companies to reduce ticket fraud by combining a solid physical barrier with the latest ticket scanning technology.
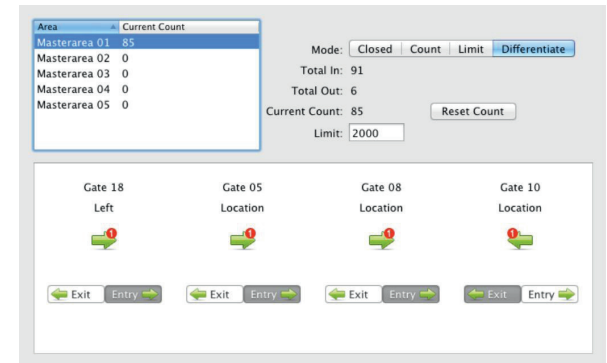

THE TURNSTILE

The cross-shaped turnstile of the Gatekeeper system creates a physical barrier to your event or designated area. It incorporates an automated locking system, preventing access once your capacity has been reached. The Gatekeeper can be combined with Mojo Barriers' standard barrier system to link entrance points and create emergency exits.
THE COMPUTER SYSTEM

Mojo Barriers has developed a specialist software program linked to the Gatekeeper, allowing you to control all entrances and exits from one central workstation and see and respond to any ticket issues quickly and efficiently. From here you can control the system with sttings including „Count" where it counts people coming in, „Limit" where gates lock automatically once capacity is reached and „Differentiate" where the system counts people in and out in real time.

THE SCANNING

The Gatekeeper system is compatible with any scanning technology from barvodes to RFID and QR codes. It can be adapted to hold any form of ticket scanning hardware, negating the need for hand scanners and the labor required to operate them. The system is programmed to only open once it receives a signal from the ticketing company's database that the ticket is genuine, cutting down on ticket fraud. Mojo Barriers requires no access to this data, ensuring it remains safely in your hands.

TECHNICAL SPECS GATEKEEPER

» Integrated into line-up gates

» Fully compatible with the Mojo Barrier system

» Proprietary software counts people entering and exiting a controlled area

» Multiple entrances and exits possible

» Multiple options in counting, limiting and differentiating the ingress/egress

» Quick change from only entry, only exit or crowd-flow both ways

» Real time readout at any given location, data and graphical

» Combines high quality aluminium engineering with intelligent crowd monitoring IT software
