

MOJO BARRIER 45° NEGATIVE CORNER, SILVER [BLUE]

The MOJO 45° Negative Corner in silver creates sharp inward angles in your barrier layout. Fully compatible with all MOJO barricade elements, this fixed-angle unit offers a sleek, secure solution for custom crowd control designs.

SKU: 1002007.00 | **Categories:** [Crowd Control](#), [MOJO Concert Barricades](#)

PRODUCT DESCRIPTION

The MOJO Barrier 45° Negative Corner in silver—also known as the “Blue” corner—is a specialized barricade element engineered to create clean, consistent angles in high-capacity crowd control layouts. With its fixed 45° inward angle, this unit is essential for guiding audience flow around stages, platforms, or other production areas where barrier lines need to bend inward without gaps or instability.

Crafted from high-grade welded aluminum with a clean silver finish, the 45° Negative Corner is built to match the full line of MOJO barricade components. It integrates effortlessly via a single-bolt nose-plug connection and features a full sloped baseplate for strength, drainage, and trip-free access. Despite its compact footprint, it delivers full-strength performance with reliable load resistance for festivals, sports arenas, or front-of-stage applications.

Need a darker finish for stage-facing areas? This barrier is also available in Black for low-visibility setups.

Key Features of the MOJO Barrier 45° Negative Corner Silver:

- **Fixed 45° Inward Angle** – Ideal for turning barricade lines inward around platforms or restricted zones
- **Clean Silver Aluminum Finish** – Matches traditional setups for public-facing installations
- **Sloped Floorplate with Grooved Surface** – Enhances drainage and reduces trip risk
- **Nose-Plug Interlock System** – Connects securely with other MOJO barriers via single bolt and pin
- **Compact but Strong** – Delivers full crowd resistance in a smaller footprint
- **Also Available in Black** – For seamless integration into dark stage designs

Ideal Applications

- Angled turns around mixing desks, FOH zones, or hospitality risers
- Inner corner transitions along barricade lines
- Tight crowd control layouts in indoor venues
- TV productions, public events, or VIP cordons
