

MOJO BARRIER 45° POSITIVE CORNER, SILVER [GREEN]

SKU: 1002006.00 | **Categories:** [Crowd Control](#), [MOJO Concert Barricades](#)

PRODUCT DESCRIPTION

The MOJO Barrier 45° Positive Corner in silver—often referred to as the “Green” corner—is a critical component in creating structured, angular crowd control layouts at concerts, festivals, and high-capacity venues. With a fixed 45° positive angle, this module is ideal for safely redirecting foot traffic around stages, FOH areas, and production zones while maintaining a clean, uniform barricade line.

Constructed from welded aluminum with a sleek silver finish and full sloped base plate, this corner barrier balances strength with streamlined visibility. It features a rear brace for enhanced stability under pressure and connects securely to adjacent [MOJO units](#) using the standard nose-plug interlock and single-bolt fastening system. The grooved, anti-slip base improves safety in wet or high-traffic conditions while maintaining barrier-free access for staff and crew.

The silver variant delivers a polished, high-visibility aesthetic ideal for traditional stages, daylight setups, or outdoor events. For darker environments or low-profile builds, this corner is also available in a matte [black finish](#)—allowing production teams to match their barricades to stage visuals or venue specifications with ease.

Whether you're anchoring corners near a stage thrust or outlining secure access zones, the MOJO Barrier 45° Positive Corner Silver offers dependable strength and clean, professional form.

Key Features of the MOJO Barrier 45° Positive Corner Silver:

- **Fixed 45° Positive Angle** – Ideal for creating sharp turns in crowd control layouts
- **Silver Aluminum Finish** – Clean, high-visibility look for traditional venues
- **Full Base Plate with Rear Brace** – Built for structural integrity under crowd pressure
- **Interlocks with All MOJO Barriers** – Seamless system-wide compatibility
- **Tool-Free Assembly** – Connects via nose-plug and single-bolt fastening
- **Also Available in Black** – Choose black for low-profile setups or broadcast applications

Ideal Applications:

- Creating structured corners in front-of-stage barricade setups
- Routing foot traffic around thrust stages or VIP platforms
- Outlining FOH, camera pits, or backstage compounds
- Enhancing crowd control in angled areas or tight spaces
- Pairing with straight and Vario barriers in hybrid MOJO layouts
