

# MOJO CABLE ENTRY BARRIER, SILVER

The MOJO Cable Entry Barrier in silver provides safe, efficient cable management with a pass-through for multicore cables, perfect for any event setup.

SKU: 1002002.00 | Categories: Crowd Control, MOJO Concert Barricades

#### PRODUCT DESCRIPTION

The MOJO Cable Entry Barrier in silver is a specialized barricade element designed for efficient and secure cable pass-through in high-traffic areas. Built with the same structural integrity as the MOJO Barriers, this unit enables clean, kink-free routing of multicore and signal cables between the stage and front-of-house (FOH)—without compromising crowd safety or event flow.

Made from high-strength welded aluminum with a silver finish, the Cable Entry Barrier blends seamlessly into traditional venue setups and high-visibility builds. The removable center panel opens via a 4-point hinge and bolt system, allowing quick access for stagehands or tech crews during setup or showtime.

A recessed cable channel in the base accommodates <u>cable bridges</u> or multicore lines up to 3.15 high, keeping cables flat, safe, and out of the audience's path. Like all MOJO barrier components, this unit connects securely via the nose-plug system and must be framed between two Straight Barriers for full structural support.

Whether you're working on a stadium load-in, festival build, or TV shoot, this barricade element offers smooth cable access without disrupting the continuous security line.

#### **Key Features of the MOJO Cable Entry Barrier Silver:**

- Welded Aluminum Frame Durable and lightweight for live event use
- Removable Center Panel 4-point hinge system allows fast access to cables
- Cable Channel Base Fits cable runs or bridges up to 3.15 in height
- Tool-Free Interlocking System Fast integration between Straight Barriers
- Secure Crowd Line Continuity Maintains full stability in high-pressure zones
- Clean Silver Finish Ideal for venues, arenas, and classic event aesthetics

#### **Ideal Applications**

- FOH cable runs at stadium concerts, festivals, and arena shows
- Audio, video, and power pass-through for broadcast and live TV events
- Tour builds requiring fast access and safe cable routing
- Back-of-house media zones with continuous barricade lines
- Events where cable safety and professional presentation are critical
