

MOJO BARRIER FLEX CORNER, BLACK

The MOJO Flex Corner Barrier in black offers adjustable angles from -90° to +90°, ideal for versatile event layouts.

SKU: 1002015.00 | Categories: Crowd Control, MOJO Concert Barricades

PRODUCT DESCRIPTION

The MOJO Barrier Flex Corner in black is a fully adjustable barricade element designed for flexible and space-conscious crowd control configurations. With an expansive angle range from -90° to +90°, this component is ideal for wrapping barricades around FOH setups, camera platforms, rounded stages, or tight production areas where standard corners won't fit.

Crafted from welded aluminum with a matte black finish, the Flex Corner visually blends into dark stage environments, making it a top choice for live concerts, film sets, and discreet production zones. Unlike other corner units, the Flex Corner features no floorplate, allowing it to conform to uneven terrain or flush-mount applications without compromising safety or structure.

Hinged wings allow precision angle adjustments on-site, while standard MOJO interlocks ensure seamless compatibility with all straight and corner units. Once secured between two <u>Straight Barriers</u>, the <u>Flex Corner</u> delivers stable crowd control—even in high-pressure areas with limited layout options.

Whether you're optimizing camera sightlines or building a custom barricade around obstructions, the MOJO Flex Corner is the answer to adaptable barrier design. It's also available in a silver variant for traditional venue builds.

Key Features of the MOJO Flex Corner Black:

- Adjustable from -90° to +90° Supports custom layouts around stages and platforms
- No Floor Plate Design Perfect for uneven ground or flush setups
- Hinged Aluminum Wings Allows live angle adjustments during setup
- Matte Black Finish Ideal for low-visibility production zones and stage aesthetics
- Standard MOJO Interlocking Fast, secure connection with adjacent barriers
- Compact & Lightweight Easy to transport, store, and deploy

Ideal Applications

- Barricade layouts around FOH, camera risers, or sound towers
- Rounded or angled barricade builds near stages and catwalks
- Space-restricted areas requiring angled solutions
- TV and broadcast setups with discreet barrier needs
- Temporary crowd channels or adaptive barricade lines
