

MOJO BARRIER FLEX CORNER, SILVER

Flexible silver MOJO barrier for sharp or curved layouts. Hinged, floorless design allows angles from -90° to +90°, ideal for tight or uneven spaces.

SKU: 1001998.00 | Categories: Crowd Control, MOJO Concert Barricades

PRODUCT DESCRIPTION

The MOJO Barrier Flex Corner in silver is a fully adjustable barricade element designed for seamless, curved, or angled barrier configurations at live events. Ideal for stages, FOH zones, and non-linear crowd control layouts, this flexible module allows event teams to adapt to spatial challenges without compromising safety or flow.

Crafted from welded aluminum with a clean silver finish, the Flex Corner features independently hinged wings that allow angle adjustments from -90° to +90°. Its open-base design (no floor plate) makes it especially suited for tight spaces or uneven terrain—like around camera platforms, risers, or entry points.

The unit connects via the standard MOJO interlocking system and requires bracing from two adjacent MOJO Straight Barriers for structural integrity. Once installed, the Flex Corner becomes a stable and visually cohesive component of any barrier line.

Fully compatible with the entire <u>MOJO range</u>, including the <u>black Flex Corner variant</u>, this version allows rental teams to coordinate aesthetics or mix finishes to suit different zones of an event.

Key Features of the MOJO Barrier Flex Corner Silver

- Adjustable Corner Range Hinged wings allow smooth angle transitions from -90° to +90°
- No Floor Plate Ideal for tight spaces, uneven surfaces, and complex terrain
- Clean Silver Finish Matches standard MOJO Straight Barriers for a cohesive look
- Tool-Free Interlocking System Connects easily with MOJO barriers for fast setup
- Lightweight & Portable Easy to transport, install, and adapt on-site
- Durable Welded Aluminum Built to withstand high crowd pressure
- Compatible with Full MOJO Lineup Works alongside gates, corners, cable access, and more
- Mix & Match Available in black for visual control in stage and broadcast environments

Ideal Applications

- Curved barrier layouts around FOH or camera risers
- Entryways, access paths, or angled transitions in crowd control systems
- Festival and stadium stage edges that require non-linear barricading
- Indoor installations with spatial limitations or unique room geometry
- Configurable crowd zones with quick visual setup
