

MOJO BARRIER MEGA EXIT GATE

The MOJO Barrier Mega Exit Gate offers secure, large-scale exit and entry points in crowd control setups, suitable for both pedestrian and vehicle access at high-traffic events.

SKU: 1002541.00 | **Categories:** [Crowd Control](#), [MOJO Concert Barricades](#)

PRODUCT DESCRIPTION

The MOJO Barrier Mega Exit Gate is a heavy-duty, double-wing access gate engineered for secure crowd control and operational efficiency at high-traffic events. Whether used for pedestrian flow, service logistics, or emergency access, this gate offers a reliable 9.84 ft (3 m) wide opening that integrates seamlessly into your [MOJO barrier line](#).

Constructed with robust aluminum gates and black steel floorplates, the Mega Exit Gate is designed to perform under pressure. Its dual-swing doors open outward, away from the crowd, to maintain safety and control in high-density situations. A vertical bolt locking system with a foot lever allows for rapid release and closure—making it ideal for emergency egress or backstage logistics where timing is critical.

The sloped floorplate eliminates the need for separate ramps, ensuring easy vehicle passage—whether for production vans, forklifts, or first responders. Fully compatible with all [MOJO straight barriers](#), the gate enhances both the safety and functionality of your barricade layout.

Key Features of the MOJO Barrier Mega Exit Gate

- **Wide 9.84 ft Opening** – Accommodates pedestrians, service vehicles, or emergency crews
- **Double-Wing Gate Design** – Doors open outward from the crowd for safe evacuation
- **Vertical Bolt Locking System** – Quick-release mechanism activated via foot lever
- **Black Steel Sloped Floorplate** – Provides smooth vehicle access without external ramps
- **Heavy-Duty Aluminum Construction** – Built for professional event use
- **Full MOJO Compatibility** – Connects with standard MOJO straight barriers for seamless integration

Ideal Applications

- Emergency exits for large-scale festivals or concerts
- Service vehicle and crew access points in secure areas
- Controlled pedestrian entry/exit for stadiums or arenas
- High-capacity exit routes in public event spaces
- Mobile medical or security access for backstage zones
