

## MOJO BARRIER 22.5° POSITIVE CORNER, BLACK [PINK]

Known as the "Pink" 22.5° Positive Corner, this MOJO Barrier in black seamlessly integrates with straight barricades to create smooth angles for enhanced crowd control.

**SKU:** 1002021.00 | **Categories:** [Crowd Control](#), [MOJO Concert Barricades](#)

## PRODUCT DESCRIPTION

The MOJO Barrier 22.5° Positive Corner—known internally as the “Pink” corner—is a purpose-built element for creating soft, controlled angles in crowd control layouts. With its subtle 22.5° bend, this barrier smoothly transitions barricade lines away from the stage, reducing crowd pressure and maintaining safe flow across large venues.

Crafted from high-strength welded aluminum, this corner piece features a durable black finish on the upright frame and a sloped silver base plate for added visual contrast and wear resistance. A full-width floor plate and dual rear bracing ensure structural integrity, even under heavy audience load, while the integrated step platform gives security teams direct line-of-sight over the crowd.

Ideal for wrapping barricades around thrust stages, B-stages, FOH zones, or catwalks, the Pink 22.5° Corner integrates seamlessly with all other [MOJO straight](#) and specialty barrier types via the standardized nose-plug interlocking system and single-bolt connection.

If you’re shaping curved barrier layouts without compromising strength or setup speed, this unit delivers clean geometry and full compatibility across your [barricade configuration](#).

### Key Features of the MOJO Barrier 22.5° Positive Corner Black

- **22.5° Positive Angle** – Soft corner creates natural crowd flow around stages and structures
- **Rear Step Platform** – For elevated sightlines and response from security personnel
- **Durable Build** – Black anodized aluminum upright with silver floorplate
- **Double Rear Bracing** – Reinforced stability for high-pressure barricade lines
- **Non-Slip Base Plate** – Sloped and grooved to prevent standing water and trip hazards
- **Full MOJO Compatibility** – Connects with straight barriers and specialty pieces
- **Tool-Free Connection** – Standard MOJO single-bolt nose-plug locking system
- **Available in Silver** – Also offered in silver finish for traditional venue aesthetics

### Ideal Applications

- Shaping soft curves around thrust or B-stages
- Creating smooth flow around FOH, camera decks, or VIP zones
- Stadium or arena barrier systems with angled barricade zones
- Crowd control around red carpet or festival catwalks
- Front-of-stage lines requiring subtle redirection of pressure
