

## MOJO BARRIER STRAIGHT, BLACK

The industry-leading MOJO Barrier Straight in black delivers unmatched stability and versatility, engineered for superior crowd control at concerts, festivals, and live events.

SKU: 1026916.00 | Categories: Crowd Control, MOJO Concert Barricades

## PRODUCT DESCRIPTION

The MOJO Barrier Straight – Black is a premium, professional-grade <u>barricade system</u> designed for high-capacity <u>crowd control</u> at <u>concerts</u>, <u>festivals</u>, sporting events, and live productions. Crafted from welded aluminum with a matte black anodized finish, this straight barricade combines strength, fast setup, and clean stage aesthetics—making it a go-to choice for production teams and event security professionals alike.

The black finish is specifically designed to blend into the background of stage builds, broadcast sets, or darkened venues where visual discretion is key. For more traditional or high-visibility setups, a <u>silver variant</u> is also available—both barrier options interlock seamlessly within the same system for hybrid barrier layouts.

Each section connects quickly via a secure nose-plug system, locked with a single bolt and location pin. The sloped base plate minimizes trip hazards and allows fluid drainage, while the integrated rear step gives security personnel elevated access for monitoring. Rear bracing adds structural stability, and the rounded top rail ensures attendee comfort in front-of-stage settings.

From barricade lines at major festivals to access control at TV productions, MOJO Straight Barriers form the backbone of safe, modular crowd management. These units are fully compatible with <u>corners</u>, <u>gates</u>, <u>cable bridges</u>, and the full <u>MOJO Barrier range lineup</u>—allowing teams to build out flexible, scalable barrier layouts for any size event.

## **Key Features of the MOJO Barrier Straight Black:**

- Low-Visibility Black Finish Ideal for concerts, film sets, and professional stage setups
- Interlocks with <u>Silver Barriers</u> Build hybrid layouts with seamless system compatibility
- Welded Aluminum Frame Strong yet lightweight for fast deployment and transport
- Rear Step Platform Elevates security for improved crowd observation
- Sloped Anti-Slip Base Plate Reduces fluid accumulation and trip risks
- Secure Nose-Plug Connection Assembles rapidly with bolt and pin fastening
- Comfort-Focused Design Rounded top rail for guest-friendly barrier contact

## **Ideal Applications:**

- Front-of-stage <u>barricades at festivals</u> and <u>arena or stadium concerts</u>
- TV recordings and award shows with black-stage environments
- VIP zones, FOH perimeters, and security lanes
- Red carpet and backstage access control
- Queue management and temporary access routes

**Dimensions** 39.36 × 46.45 × 50.39 in

**Panel Type** Straight

Color Black (anodized)

**Finish Option** Also available in silver

**Material** Welded aluminum

Height 47.24 (top rail height)

**Interlocking System** Nose-plug connection with single bolt fastening and location pin

**Base Plate** Sloped, grooved for drainage
