

MOJO BARRIER VARIO CORNER, BLACK

The MOJO Vario Corner Barrier in black offers fully adjustable angles from -60° to +60°, ideal for creating custom barricade layouts at concerts and events.

SKU: 1002016.00 | **Categories:** [Crowd Control](#), [MOJO Concert Barricades](#)

PRODUCT DESCRIPTION

The **MOJO Vario Corner Barrier in black** is a fully adjustable barricade element designed for creative and functional [crowd control](#) configurations. Whether you're designing a rounded stage front, angling security lines, or connecting barricades around structures, this angle-adjustable corner adapts to your layout needs with a smooth and secure fit.

Crafted from welded aluminum with a matte black finish and a partially sloped silver base plate, the Vario Corner seamlessly integrates into any [MOJO barricade system](#). Its central hinge allows for a full range of motion between **-60° and +60°**, giving production teams the freedom to shape barriers around stages, FOH areas, camera platforms, or VIP zones.

Like all MOJO barriers, it features a single-bolt nose-plug connection and a grooved anti-slip floor plate. The divided base ensures strength under pressure while preserving accessibility for performers, crew, or ADA-compliant areas.

Also available in a [silver variant](#), the MOJO Vario Corner offers the same structural benefits in a classic, high-visibility finish—ideal for traditional venues or productions where aesthetics require a lighter appearance. Both versions connect seamlessly with all MOJO components, giving teams flexibility to match functionality with visual design.

From high-pressure festival fronts to sleek indoor installations, the **MOJO Vario Corner** delivers stability, safety, and seamless adaptability—without compromising build speed or visual flow.

Key Features MOJO Vario Corner Barrier Black:

- **Adjustable from -60° to +60°** – Perfect for curved layouts and tight spaces
- **Black Anodized Finish** – Blends into stage or production backgrounds
- **Welded Aluminum Frame** – Lightweight, robust, and built for touring
- **Sloped Floor Plate with Grooves** – Slip-resistant and trip-safe
- **Compatible with MOJO System** – Connects to all standard MOJO barricades
- **Tool-Free Setup** – Secures via single-bolt and location pin system

Ideal Applications:

- Rounded or catwalk stages at concerts and tours
- Connecting barricades around obstructions or corners
- Indoor events, award shows, and broadcast setups
- Custom safety layouts at sports arenas or large venues
