TERRAPLAS® HD PANELS, DRIVABLE, WITH FEET, VENTILATED

TerraPlas HD Panels deliver high-performance coverage for stadium turf and synthetic grass. Featuring a ventilated underside, anti-slip surface, and tool-free cam-lock system, this drivable modular flooring is ideal for concerts, sports, and large-scale events requiring safe, breathable ground protection.

SKU: i123456789.36 | **Categories:** Event Flooring & Ground Protection, Heavy Duty Drivable Flooring

PRODUCT DESCRIPTION

TerraPlas HD Panels deliver professional-grade protection for natural and synthetic turf during large-scale events. Featuring a ventilated underside, anti-slip surface, and tool-free cam-lock system, these drivable flooring panels are ideal for concerts, stadium builds, and productions requiring durable, breathable ground cover.

Each TerraPlas HD panel measures 79 × 79 and includes integrated feet that elevate the surface—allowing air, water, and light to reach the turf beneath. Constructed from UV-stabilized translucent HDPE, the panels support grass health even during extended use, while their textured finish ensures slip resistance in all conditions.

The modular cam-lock system enables fast, secure assembly without tools, making TerraPlas HD Heavy-Duty Panels a favorite among event crews working on tight timelines. Designed for compatibility with TerraPlas No Feet and **standard Terraplas systems** , this flooring allows flexible layout customization across mixed-use zones, from pedestrian areas to reinforced stage compounds.

Heavy-Duty Turf Flooring for Stadium Events

TerraPlas HD is engineered for venues that demand stronger load support while maintaining turf health. The ventilated design prevents compaction and moisture buildup beneath event structures, while the light-transmitting panels allow turf to photosynthesize.

Reinforced for medium-duty vehicle loads and pedestrian traffic, TerraPlas HD integrates seamlessly into complex staging environments. Its flush compatibility with other TerraPlas formats gives rental pros the ability to adapt by field type, load zones, or surface sensitivity—without sacrificing speed or performance.

Whether you're creating FOH risers, backstage areas, or wide pedestrian lanes, TerraPlas HD Heavy-Duty Panels combines protection, safety, and ease of use.

TerraPlas HD Panels Key Features:

- **Ventilated Design with Feet** – Supports grass health via airflow, water flow, and light transmission
- **Heavy-Duty HDPE Panels** – UV-stabilized for durability in all conditions
- **Anti-Slip Surface** – Safe for high-footfall areas in any weather
- **Tool-Free Cam-Lock System** – Speeds up installation with secure interlocking panels
- **Modular Compatibility** – Integrates with TerraPlas No Feet and standard TerraPlas systems
- **Multi-Surface Use** – Ideal for natural grass, synthetic turf, or reinforced event zones

Ideal Applications:

- Stadium concerts and sports events, utilizing TerraPlas HD Panels
- Pedestrian walkways on natural or synthetic turf
- VIP lounges, media zones, and FOH structures
- Camera platforms, artist compounds, and temporary staging
- Light-vehicle access lanes on reinforced grass areas

TECHNICAL SPECS

Weight	92 lbs
Dimensions	79 × 2.5 × 39 in
Material	UV-stabilized translucent HDPE
Top Surface	Textured, anti-slip pattern
Load Capacity	680psi / 4700 kN per m^2 / 98000 lbf per ft^2
Locking Mechanism	Integrated cam-lock system
Temperature Range	−4˚F to 122˚F (−20˚C to +50˚C)
Accessories	Cam-lock keys, transport pallets, access ramps
