TERRATRAK PLUS® GROUND PROTECTION PANELS, TRANSLUCENT

TerraTrak Plus Translucent Panels deliver heavy-duty turf protection with built-in breathability. Ideal for stadium events and outdoor productions, these HDPE panels allow air, water, and light to reach the turf—minimizing grass stress during long-term use. Designed for high footfall and light vehicles, with seamless tool-free installation.

SKU: 1001245.00 | **Categories:** Event Flooring & Ground Protection, Heavy Duty Drivable Flooring

PRODUCT DESCRIPTION

TerraTrak Plus Translucent Panels are engineered for professionals who need maximum load-bearing capacity without compromising the health of natural grass. Designed for stadiums, concert venues, and sports fields, this premium ground protection system enables light, air, and moisture to pass through—keeping turf alive even under heavy-duty use.

Built from UV-stabilized translucent HDPE, these heavy-duty panels support forklifts, trucks, and mobile stages while maintaining the integrity of the turf below. The translucent material allows grass to continue photosynthesizing, reducing post-event recovery time and ensure the effectiveness of the TerraTrak Plus Translucent system in turf restoration costs.

High-Performance Turf Protection with Grass Health in Mind

Each panel measures approximately 47.2 × 47.2 and supports loads up to 160 tons. A slip-resistant tread ensures secure footing for pedestrians and crew, while the rugged structure delivers stability for drivable lanes, FOH decks, or staging compounds.

The panels lock together using a circumferential cam-lock system—tool-free and fast for two-person crews to install. Whether you're building a broadcast platform on a soccer field or laying down drivable access over turf, Terratrak Plus Translucent panels deliver the strength you need with the grass-conscious protection venues demand.

Looking for the same strength in a more visually defined format? The TerraTrak Plus Gray variant offers the same load capacity with a sleek, opaque finish—ideal for crew lanes and designated zones.

TerraTrak Plus® Translucent Key Features:

- **Extreme Load Capacity** – Supports up to 160 tons; safe for vehicles, forklifts & lifts
- **Turf-Safe Translucency** – Allows air, light, and moisture to pass for live grass survival
- **Anti-Slip Surface** – Raised tread delivers reliable traction in all weather
- **Tool-Free Cam-Lock System** – Fast and secure installation by small crews
- **Modular Coverage** – Each interlocking pair covers 26 sq ft (≈2.42 m^2)
- **Durable HDPE Construction** – UV-stabilized for outdoor use in all climates
- **System-Compatible** – Connects seamlessly to Supa-Trac and other flooring types via adapters

Ideal Applications:

- Stadium turf protection for concerts or large events using TerraTrak Plus Translucent panels
- Temporary drivable lanes over grass or mixed terrain
- Pedestrian walkways that need turf-safe performance
- FOH and media platforms on natural grass
- Hospitality areas and backstage zones that prioritize grass health

TECHNICAL SPECS

Weight	101.41 lbs
Dimensions	94.49 × 1.57 × 47.24 in
Color	Translucent
Material	High-Density Polyethylene (HDPE)
Accessories	Loading ramps, patented transition elements
Coverage (Pair)	≈ 26 sq ft (2.42 m^2)
Surface Texture	Anti-slip with traction ribs
Load Capacity	Suitable for heavy vehicles, forklifts, carts, pedestrian traffic, and production infrastructure (up to 160 tons)
Connection System	Steel-strength nylon cam-lock (tool-free)
Breathability	urf-ventilating design allows air, light, and water penetration
Temperature Range	−4°F to 122°F (−20°C to +50°C)
