

TERRAPLAS[®] TURF PROTECTION PANELS, NO FEET, FLAT SURFACE

TerraPlas No Feet panels provide flat, stadium-grade turf protection for concerts, walkways, and high-traffic pedestrian zones. Lightweight, ADA-compliant, and fast to install.

SKU: i123456789.35 | **Categories:** [Event Flooring & Ground Protection](#), [Turf and Surface Protection](#)

PRODUCT DESCRIPTION

TerraPlas No Feet Turf Protection Panels are a premium stadium-grade [flooring solution](#) designed for concerts, sports events, and large-scale productions where flat, continuous pedestrian access is essential. Originally developed for U.S. stadiums, this version eliminates ventilation legs in favor of a fully flush profile—delivering a trip-free, ADA-compliant surface across sensitive turf areas.

Constructed from **UV-stabilized translucent HDPE**, these lightweight, modular panels offer a clean aesthetic and safe walking surface while protecting grass from compaction and wear during short- to medium-term use. Their flush profile and visual consistency make TerraPlas No Feet Turf Protection Panels ideal for polished, high-traffic environments.

Each panel measures **79 × 79** and connects via a **tool-free cam-lock system**, enabling rapid installation with minimal crew. The textured, anti-slip surface ensures safe footing in all weather conditions, while the translucent material allows light to reach the turf—helping reduce stress during shorter-term installs.

Smart Flooring for Stadium-Scale Events

TerraPlas No Feet Turf Protection Panels are ideal for large pedestrian zones, audience seating areas, VIP decks, camera runs, and media platforms. It is **not designed for vehicular traffic**, making it the go-to choice when speed, safety, and surface continuity are the top priorities.

Unlike ventilated panels, this version prioritizes a **flat, accessible walking surface** over long-term airflow. While it lacks the underside ventilation of the "with feet" version, it excels in **short-term, high-footfall applications** that require ultra-fast deployment and clean design.

Compatible with [TerraPlas with Feet](#), as well as modular systems like [TerraTrak](#) or [TerraFlor](#), TerraPlas No Feet allows for seamless integration across mixed zones with different load or ventilation needs—ideal for rentals, stadiums, and touring productions.

Terraplas Turf Protection Panels Key Features:

- **Flat, Seamless Design** – Flush profile ensures uniform, ADA-compliant walkways and is central to TerraPlas No Feet Turf Protection Panels.
- **Durable HDPE Construction** – Lightweight, UV-stabilized, translucent material
- **Non-Ventilated Underside** – Best for short-term use on turf without airflow gaps
- **Anti-Slip Surface Texture** – Safe footing in all conditions
- **Cam-Lock Connection System** – Fast setup without tools
- **Compatible Integration** – Mixes with Terraplas with Feet and similar panel systems
- **Modular Deployment** – Hand-installable and efficient for large events

Ideal Applications:

- Stadium concerts and sporting ceremonies
- Pedestrian walkways and ADA access lanes
- VIP and media platform flooring
- High-footfall audience hospitality zones
- Camera cart runs and broadcast platforms

TECHNICAL SPECS

Weight	110 lbs
Dimensions	79 × 2.5 × 79 in
Material	High-density polyethylene (HDPE), UV-stabilized
Color	White / Translucent
Top Surface	Textured anti-slip finish
Load Capacity	Pedestrians and light-wheeled carts only (not drivable)
Locking Mechanism	Integrated cam-lock system
Temperature Range	-4°F to 122°F (-20°C to +50°C)
Accessories	Ramps, transport pallets, cam-lock keys
