

TERRAPLAS[®] TURF PROTECTION PANELS, WITH FEET, VENTILATED

TerraPlas Turf Protection Panels with Feet offer ventilated, slip-resistant turf protection for stadiums and event lawns. Ideal for concerts, sports, and festivals, these UV-stabilized HDPE panels lock together tool-free for fast, year-round use.

SKU: 1004343.00 | **Categories:** [Event Flooring & Ground Protection](#), [Turf and Surface Protection](#)

PRODUCT DESCRIPTION

TerraPlas turf protection panels with Feet is a premium [turf protection system](#) designed for stadiums, concerts, and outdoor venues that require safe ground cover without compromising the health of natural grass. Engineered with patented ventilation feet, these lightweight panels elevate the surface slightly, allowing air, water, and light to reach the turf even during long-duration events.

Constructed from UV-stabilized translucent HDPE, each panel covers a 79" x 79" area and locks seamlessly into the next via an integrated cam-lock system—no tools required. The textured surface ensures slip resistance in all weather conditions, making it ideal for areas with high foot traffic, such as audience spaces, walkways, and VIP zones.

This durable, modular solution is designed for event professionals who require rapid deployment and reliable performance in environments with light vehicular traffic and high foot traffic. Whether you're protecting a stadium field during a music festival or outfitting a high-capacity venue for a multi-day event, TerraPlas delivers protection with performance.

Smart Flooring for Grass Protection

Built to withstand temperatures ranging from -4°F to 122°F (-20°C to +50°C), these panels perform reliably in all seasons—making them ideal for year-round indoor and outdoor use. For applications that require the same trusted surface but without elevation, the [TerraPlas No-Feet variant](#) is also available—ideal for pedestrian-heavy zones or situations with minimal turf exposure concerns.

Unlike solid mats that suffocate turf, TerraPlas with Feet is designed to protect sensitive grass surfaces while maintaining turf viability. Its ventilated underside promotes healthy airflow, drainage, and photosynthesis—minimizing turf damage even during extended use.

Thanks to its modularity and hand-deployable design, it's a favorite among rental companies and stadium production teams. TerraPlas is also compatible with other flooring systems, allowing flexible integration into existing event infrastructure such as [TerraFlor](#), [TerraTrak](#), or [Supa-Trac](#).

TerraPlas Turf Protection Panels Key Features:

- **Ventilated Underside** – Raised feet allow airflow, light, and water to reach the grass
- **Lightweight Panels** – Easy to handle and install, no machinery needed
- **Slip-Resistant Surface** – Safe for guests in high-traffic environments
- **Integrated Cam-Lock System** – Quick connection with no loose hardware
- **UV-Stabilized Material** – Long-lasting performance, indoors or outdoors
- **Modular Format** – Compatible with TerraTrak, TerraFlor, and other systems

Ideal Applications:

- Stadium concerts & sporting events
- **MOJO Festivals**, public ceremonies, and fan zones
- Los Angeles and Hospitality tents on turf
- Your Outdoor exhibits and lawn-based showcase
- High-footfall pedestrian routes on grass

TECHNICAL SPECS

Weight	110 lbs
Dimensions	79 × 2.5 × 79 in
Material	High-density polyethylene (HDPE), UV-stabilized
Load Capacity	Supports medium traffic, including pedestrians and light vehicles
Top Surface	Anti-slip with traction pattern
Locking System	Cam-lock system, no tools required
Temperature Range	-4°F to 122°F (-20°C to +50°C)
Accessories	Edge ramps, transport pallets, cam-lock keys
