

PORTAFLOOR

Lawn protection system for light use (pedestrians), used in stadiums and on sensitive surfaces.

Portafloor protects turf from pedestrian wear during mass events or festivals. It has a special subsurface structure that allows the ingress of air, water and UV rays to allow the underlying lawn to „breathe“ further. As a result, it can be easily covered for several days. Within a short time Portafloor can be built up and dismantled due to its rollability. The laying out of the floor takes place notably efficient and ground gentle with roller trolleys.

TECHNICAL SPECS

- » Material: Polyethylen
- » Dimensions (LxWxH): 310 x 85 mm per element
- » Weight per m²: 3,8 kg
- » Transportation: approx. 2.400 m² per truck / approx. 300 m² per pallet
- » Characteristics: UV stabilizer
- » Accessories: Roll trolley
- » Color: Green
