

SUPATRAC

Supatrac is a unique plate system that can handle sensitive surfaces such as Stadium grass, protects against external influences and damage by medium-heavy load operation. A fast assembly and disassembly guarantees the patented click system of the plates. Due to the special shape, no special tools are needed when laying. The special modular design makes it easier to leave necessary recesses on the surface and thus enables the protection of almost any soft and unstable ground. The air circulation of the covered area is ensured by a separate exhaust air and drainage system of the plates – thus the system can be used e.g. protect sensitive lawn for several days. Supa-Track is suitable for laying on almost any surface, e.g. as temporary parking, walkway or area.

TECHNICAL SPECS

- » Material: polypropylene copolymer
- » Dimensions (LxWxH): 966 x 275 x 34 mm
- » Dimensions of the pallet (LxWxH): 2.85 x 1.22 x 1.25 m
- » Weight per element: 2.025 kg
- » Weight per pallet: Empty: 112 kg,
- » Loading: 1,112 kg
- » Weight per m²: 9.7 kg
- » Capacity pallet: 32 layers; each layer 15 elements
- » Transport: 16 pallets per truck = 512 layers; 7,680 elements; 1,612.8 m²
- » Dynamic load: 3.5 t axle load Properties: UV, light and water permeable
- » Color: white
- » Accessories: ramps, transport frame
